

. Quick start

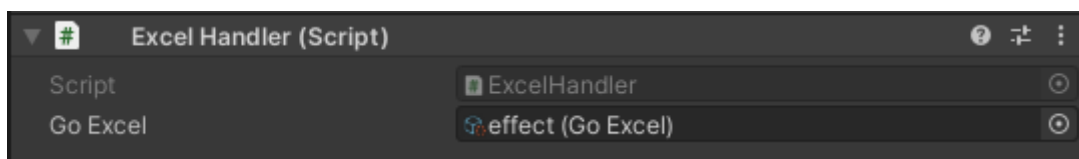

1. First you need an Excel file such as xx.xlsx ,haha

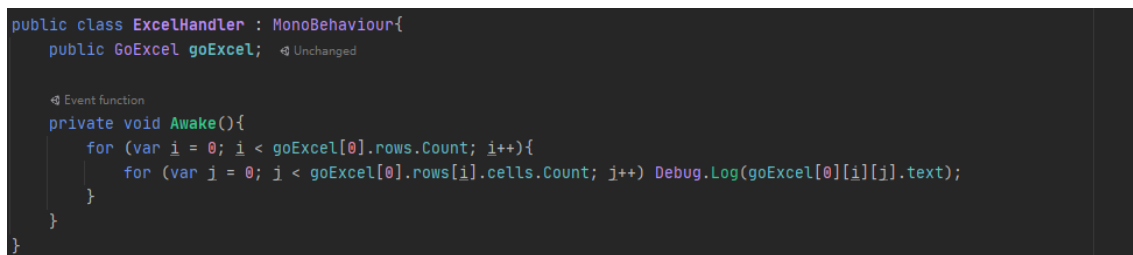

2. Drag the Excel file into the project

3. You can see he's been identified as an asset
4. What? What do you suggest we do next? lol Declare a GoExcel type then the assignment

5. And you can for loop it now

Additional:

Don't open Excel and save it at the same time, that could corrupt your files. I don't have time to test it fully, so try to make a backup of your project files. The best way to do this is to use Git or not use the edit and save features provided by the plug-in

Read only lol
